

Using Your Flexible Spending Account

Here are a few key points:

- You can spend FSA funds to pay deductibles and copayments, but not for insurance premiums.
- You can spend FSA funds on prescription medications, as well as over-the-counter medicines with a doctor's prescription. Reimbursements for insulin are allowed without a prescription.
- FSAs may also be used to cover costs of medical equipment like crutches, supplies like bandages, and diagnostic devices like blood sugar test kits.
